

## KYDZ Strong

Jonti-Craft furniture isn't just strong, it's KYDZStrong. We design our products to withstand the rigors of classroom use and ensure they are manufactured with structural integrity and stability. This means your products will last not only for the school year, but for a lifetime.

**KYDZStrong Construction.** At Jonti-Craft, we employ dowel-pin construction. This technique is stronger than the dado joints used by other companies and prevents weakening at the joints, where most of the stress occurs. Using this method also results in a more aesthetically pleasing product and extends the product's lifetime by 50 percent.

**KYDZStrong Materials.** Our products are crafted with durable materials that are made to last. Baltic Birch products are made with Eleven Ply  $\frac{3}{4}$ " Baltic Birch, the strongest plywood in the world. The plies are laid cross-ways to make each board stronger and to prevent the wood from expanding and contracting in seasonal weather changes. Our Rainbow Accents and MapleWave products are laminated on both sides making them E-Z to clean and are made with MDF cores that are uniquely formulated for maximum strength and longevity.

**KYDZStrong Recessed Backs.** Jonti-Craft products are constructed with durable recessed backs, which not only gives our furniture the aesthetic appeal you've come to expect, but also gives it extra structural support. These backs even come in a variety of functional materials so you can make the most of your furniture.
