Instructions

Setup

Step 1: Roll Unit

Roll unit to an area with a hard, flat floor. (Warning: Should only be set up and used on a hard flat surface.)

Step 2: Grasp and Lift

Grasp the edge of the top deck with both hands and lift up while pulling towards you. This will unfold the unit. (Caution: Do not place hands along hinged areas.)

Step 3: Position Unit

Lay the unit flat on the floor with all three decks roughly parallel to one another. The carpeted side should be up.

Step 4: Rise Unit

Locate the wheeled end of the rise and its leg assembly. Apply foot pressure to the leg assembly unit until it begins to rise on its own. The unit should continue to rise until it is fully upright and locked. (Important: Make sure that you hear an audible "click," indicating that the automatic lock has engaged.)

Coupling with Additional Units

Step 1: Position

Set up the units involved and position them roughly in the desired arrangement.

Step 2: Lift and Place

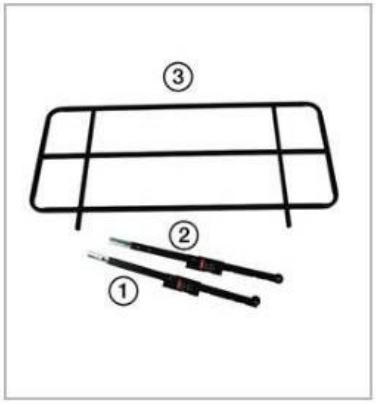

Life one riser and place it over the coupling bracket of the adjacent unit.

Step 3: Secure

Make sure the first and third levels are resting secure on the coupling brackets of the adjacent unit.

Installing Back Rail

Step 1: Locking Bracket

Install each post by hooking the locking bracket around a riser leg then swinging the clamp down. Wheels should face inward

Step 2: Back Rails

Install back rails by inserting the posts into the back rail assembly until the automatic snap-lock engages.

Folding for Transport

Step 1: Back Rails

Remove the installed back rails. Separate the riser unit from adjacent units.

Step 2: Secure Sliding

Place right foot under the wheel bracket to prevent the unit from sliding.

Step 3: Grasp Frame

Grasp the lock release, located under the left end of the top deck (3rd level), with the fingers of your left hand.

Step 4: Grasp Frame

Place right hand on the frame. Labels on the riser unit show recommended placement.

Step 5: Release Lock

While pulling out on the lock release, push the deck toward the right with your right hand until the unit folds to the floor

Step 6: Fold Together

Move to the front of the unit and grasp the front edge of the lower deck with both hands. Lift the edge and allow the decks to fold together.
