

To preserve the long life and appearance of your quality dividers we recommend the following care and cleaning procedures. If you have any questions, call **Customer Service at 800-553-0110**.

Fabric and Care

1. Screenflex divider fabrics are 100% polyester fiber that makes them colorfast to standard wet and dry cleaning procedures, as well as highly resistant to most spot cleaning solvents. Avoid excessive brushing or rubbing during cleaning practices to prevent fuzzing of the fabric surfaces. As with any fabric, a small area should be pre-tested when applying a cleanser.
2. Because of the very low absorption properties of polyester, grime will tend to remain on the fabric surface and can usually be removed without the need of vigorous treatment:
 - a. Oil or grease type spots will respond to a mild solvent or dry cleaning agent. The blotting technique will be sufficient to remove most stains.
 - b. For general dirt or grime spots, sponging with the foam from a mild detergent or upholstery shampoo will remove the accumulated dirt and grime. Room temperature solution should be sufficient. Rinse well with a clean sponge to remove traces of the water based cleaning agent. The fabric will dry very quickly but avoid over saturating the panels.
3. To maintain condition of the fabric, frequent vacuuming or light brushing is recommended. When the fabric has reached an overall soiled state, use a professional furniture cleaning service for cleaning recommendations.
